

I am an over the road truck driver, and the service XM provides is a very valueable tool, by providing the information about weather and road conditions myself and other truckers can find other routes of travel during adverse conditions, I would think local goverment would be infavor of this type of service. What really gets me is with all the problems we have in this country the members of congress can spend time on an issue like this, I would think their time could be better spent on issues like health care or the homeless or even better social security, (hey I have an idea how about road repair without taking more money from the trucking indrusty) guess that won't work cause you can't line your pockets. If you people had to work for a living maybe things would be different.
